

OLUSANYA OLUWATOBI OLUWASEUN

Data Analyst | MSc Data Science Applicant | R • SQL • Power BI • Machine Learning

✉ Olusanyatobi1234@gmail.com ☎ +234 09094778691 🔗 [LinkedIn](#) 💻 [GitHub](#) 🌐 [Portfolio](#)

PERSONAL PROFILE

Results-driven Data Analyst with practical experience in statistical computing, machine learning, and interactive dashboard development. Proficient in R, SQL, and Power BI, with a strong foundation in geospatial data management from a B.Tech in Surveying & Geoinformatics. Demonstrated ability to build end-to-end analytical pipelines — from raw data ingestion and feature engineering through to the deployment of supervised and unsupervised machine learning models. Currently seeking a Masters in Data Science to deepen expertise in advanced statistical modelling, data engineering, and applied machine learning at scale.

EDUCATION

B.Tech. in Surveying & Geoinformatics

2017 – 2023

Federal University of Technology, Minna, Nigeria | *Second Class Lower (2:2)*

Relevant modules: Spatial Statistics, Geospatial Data Analysis, Research Methods, Engineering Mathematics, Computer Applications, Data Visualisation, Geographic Information Systems

TECHNICAL SKILLS

Programming & Analysis: R (tidyverse, ggplot2, caret, tidymodels, lubridate, zoo), SQL / MySQL, DAX (Power BI)

Machine Learning: K-Means Clustering, Naive Bayes, SVM, Logistic Regression, Random Forest, NLP / Sentiment Analysis

Data Visualisation: Power BI, ggplot2, R Shiny (basic), Matplotlib

Data Tools: Microsoft Excel (Advanced), Power Query, Google Sheets

Geospatial: ArcGIS, QGIS, AutoCAD (basic), GPS & Total Station data processing

Other: GitHub, R Markdown, HTML/CSS (basic), data wrangling, feature engineering, EDA

PORTFOLIO PROJECTS

Customer Segmentation using K-Means Clustering (R) — [View on GitHub](#)

- Applied K-Means clustering to a dataset of 15,079 shopping mall customers to identify 5 distinct behavioural segments based on annual income and spending score.
- Conducted full EDA including correlation analysis, outlier detection (IQR method), and feature engineering — creating Income Tier, Spending Category, and Age Group variables.
- Determined optimal cluster count using Elbow Method, Silhouette Analysis, Gap Statistic, and Hopkins Statistic; achieved strong BSS/TSS ratio confirming cluster separation.
- Delivered actionable business recommendations per segment — Premium Targets, Careful Savers, Impulsive Buyers, Balanced Customers, and Budget Conscious groups.
- Tools: R, tidyverse, cluster, factoextra, NbClust, ggplot2

Amazon Fine Food Reviews — NLP Sentiment Analysis (R) — [View on GitHub](#)

- Built a complete NLP pipeline on 568,454 Amazon food reviews — sampling 50,000 records, labelling sentiment using the AFINN lexicon, and engineering TF-IDF features.
- Handled class imbalance via stratified downsampling and applied full text preprocessing: lowercasing, stopword removal, stemming, and sparse term elimination.
- Trained and compared 4 ML classifiers (Naive Bayes, SVM, Logistic Regression, Random Forest) using 5-fold cross-validation; evaluated on Accuracy, F1, Precision, Recall, and AUC-ROC.
- Identified key positive and negative sentiment drivers to support product review monitoring and marketing strategy recommendations.

- Tools: R, tidytext, tm, caret, e1071, glmnet, ranger, pROC

S&P 500 Historical Financial Dashboard (R + Power BI) — [View on GitHub](#)

- Preprocessed 24,654 trading days of S&P 500 data (1927–2026) in R — engineering 12 financial features including daily returns, 7/30/90/200-day moving averages, 30-day rolling volatility, and Bullish/Bearish signal classification.
- Built an interactive Power BI dashboard with 7 visuals, 6 KPI cards, 15 DAX measures (including YTD return, MoM change, YoY change), and 3 dynamic slicers.
- Dashboard reveals a cumulative S&P 500 return of over 39,000% since 1927, with peak volatility periods coinciding with 1929, 2008, and 2020 market events.
- Tools: R, tidyverse, lubridate, zoo, Power BI, DAX

WORK EXPERIENCE

Assistant General Manager | RatOS Autos Nig Limited, Ibadan June 2025 – Present

- Organised operational and inventory records into structured datasets to analyse service turnaround times, recurring mechanical issues, and demand patterns across the workshop.
- Applied data-driven insights to support workflow adjustments, resource planning, and inventory procurement decisions — reducing turnaround time by identifying bottlenecks in service scheduling.
- Translated raw operational data into interpretable reports for non-technical stakeholders, strengthening communication between management and workshop teams.
- Maintained Excel-based tracking systems for parts inventory, job scheduling, and staff performance metrics.

Freelance Data Analyst | Remote 2023 – Present

- Designed and delivered interactive Power BI dashboards and Excel-based reports for small business clients, supporting sales tracking, client engagement monitoring, and KPI reporting.
- Built and maintained structured MySQL databases for client data storage and querying, enabling more reliable and consistent business reporting.
- Performed data cleaning, transformation, and exploratory analysis on raw survey and customer datasets, improving data quality for downstream analysis.
- Communicated findings and recommendations clearly to non-technical clients through visualisations and written summaries.

NYSC Corps Member — GIS & Data Department | Office of the Surveyor General, Oyo State March 2024 – April 2025

- Attached to the Department of Mapping, Geo-information and Boundaries, supporting the digitisation of cadastral survey records and organisation of spatial datasets into structured formats for GIS analysis.
- Validated and cleaned field survey data for integration into the state's digital mapping system, identifying inconsistencies in coordinate records and boundary data.
- Applied data quality control techniques from Geoinformatics training to support the team's land information management objectives, ensuring accuracy of official geospatial records.
- Operated GPS and total station equipment for field data collection in support of land mapping and infrastructure planning assignments.

CERTIFICATIONS

Data Analysis Professional Certificate — ALX Africa 2023

Covered: Excel, Power BI, MySQL, R — data wrangling, visualisation, and reporting

Virtual Assistant Professional Certificate — ALX Africa 2023

Covered: Administrative systems, digital tools, professional communication, remote workflow management
